Multifunctional CMOS IC For Electronic Watch With Temperature Measurement Function

The DL6018 is a CMOS IC with functions of electronic watch, of thermometer °C/ °F with a range of measurement from -20°C up to + 60°C (-4°F up to + 140°F), alarm clock, stop watch, hourly audio signal, LCD with mark of month, date , days of week, Am, Pm, Alarm, °C, °F and colon.

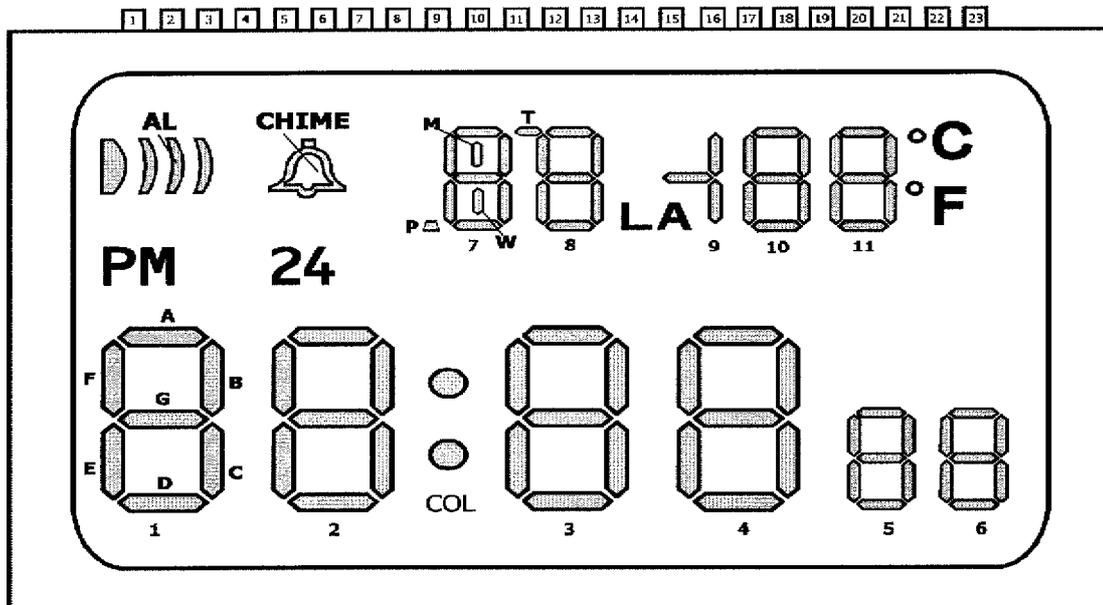

FEATURES

- Control over Liquid Crystal Display (LCD) in four-level multiplexing mode;
- Colon display;
- Control of piezoelectric transducer
- Embedded-in-chip elements of quartz generator with operation frequency 32768 Hz, capacity, resistor and voltage doubler;
- Operation with one 3.0V battery, low consumption power;
- Circuits of contacts chatter suppression on button inputs;
- Protection against static electricity

FUNCTIONS

- 6 functions of counting time and calendar with readings of hours, minutes, seconds, months, dates, days of week;
- 6-bit stop-watch with counting discreteness one hundredth second;
- Alarm clock with function of repeat of signal every 5 minutes;
- Thermometer temperature measurement range: from -20 up to +60°Ñ from -4 up to +140°F;
- User's choice of 12/24 hours time scale.

LCD FORMAT

DL6018

ABSOLUTE MAXIMUM RATINGS (operation temperature range is form -20°N up to $+75^{\circ}\text{N}$)

Characteristic	Symbol	Extreme Limit		Guaranteed Limit		Unit
		Min	Max	Min	Max	
Supply voltage from voltage source	U_{DD}	2,4	3,6	-0,3	4,0	V
Supply voltage from voltage converter	U_{CC}	3,6	5,4	-0,3	6,0	V
High-level input voltage	U_{IH}	$U_{DD}-0,3$	U_{DD}	-0,3	$U_{DD}+0,3$	V
Low-level input voltage	U_{IL}	U_{SS}	$U_{SS}+0,3$	-0,3	$U_{DD}+0,3$	V

Under limiting modes efficiency of ICs is not guaranteed. After limiting modes are cancelled the operation in extreme mode is guaranteed.

ELECTRICAL CHARACTERISTICS ($T_a = 25^{\circ}\text{C}$)

Parameter	Symbol	Test Conditions	Guaranteed Limit		Note	Unit
			Min	Max		
Dynamic consumption current	I_{DD}	$U_{DD}=3,0\text{V}$	-	3,0	1,4	mkA
Buttons switch current	I_{sw}	$U_{DD}=3,0\text{V}$ $U_{IN}=U_{DD}$	0,1	30	-	mkA
Low-level output current on pins ALA , ALB	I_{OL}	$U_{OL}=0,5\text{V}$ $U_{DD}=2,4\text{V}$	500	-	-	mkA
High-level output current on pins ALA , ALB	I_{OH}	$U_{OH}=1,9\text{V}$ $U_{DD}=2,4\text{V}$	-500	-	3	mkA
Generator starting voltage	U_{osc}	control time 5sec	-	2,4	4	V

Notes:

1 Dynamic consumption current is measured without load.

2 Nominal value of embedded capacities on pins OSC1 and OSC0 (generator's input and output) - 20 pF.

3 «Minus» specifies only current direction.

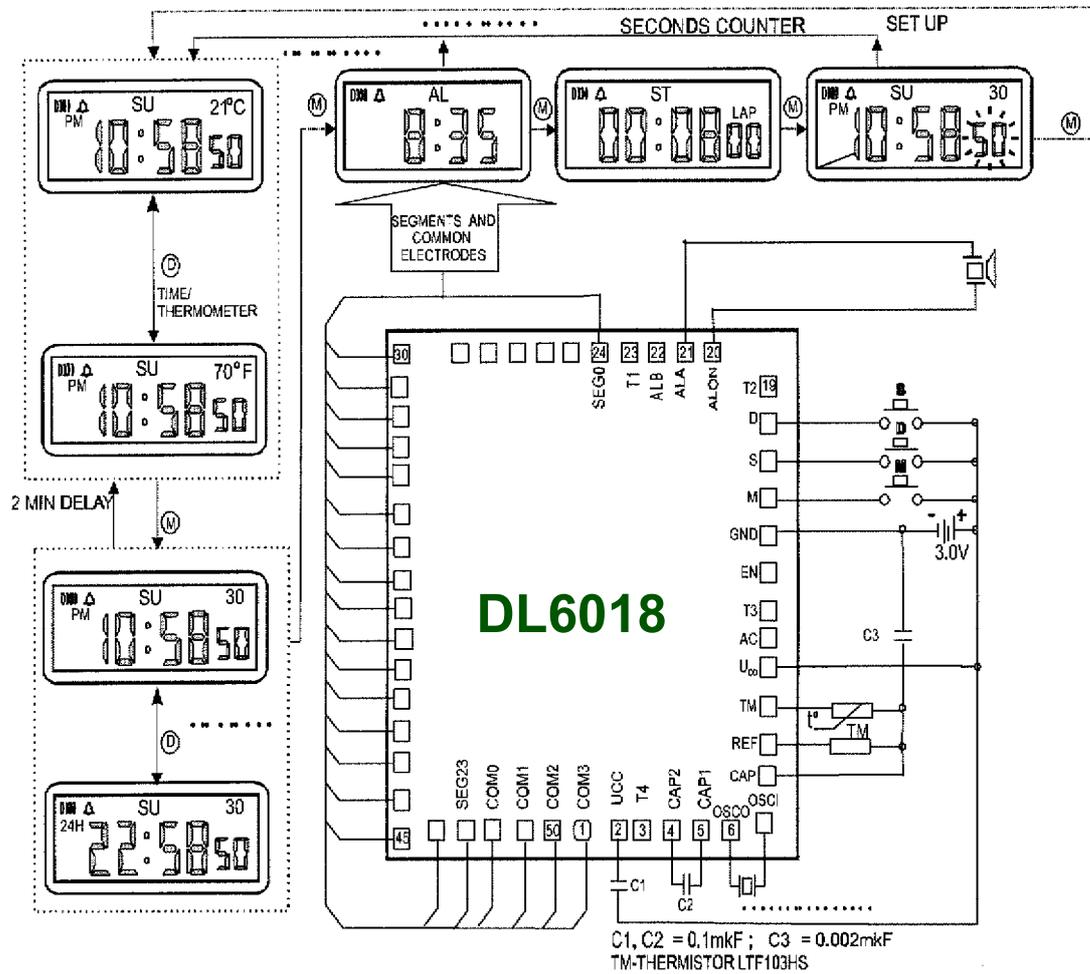

4 Parameters are controlled with quarts resonator, ensuring series resonance frequency 32768 Hz at load capacity value $C_L=10\text{ pF}$.

APPLICATION CIRCUIT

Quartz resonator parameters

$F_p = 32768\text{Hz}$

$C_L = 10.0\text{pF}$

$C_1 = 0.004\text{pF}$

$C_o = 2.5\text{pF}$

$R_s = 35\text{k}\Omega$

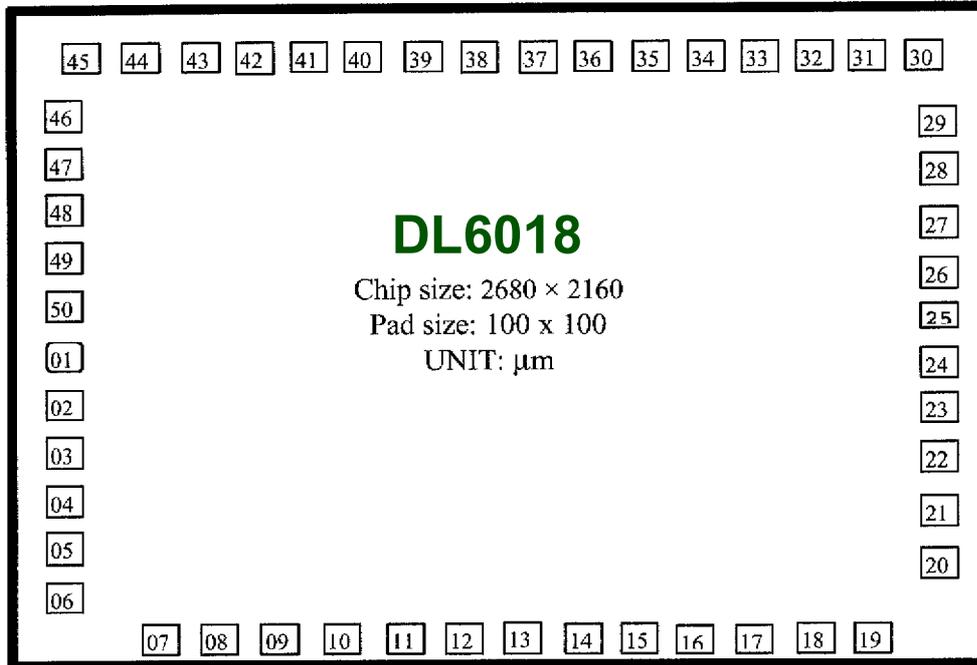

$Q = 35000$

PAD DISCRIPTION

Pad	Name Pad	Discription	Pad	Name Pad	Discription
01	COM3	Common GLI control electrode	26	SEG2	LCI digit electrode
